gjs:caption

A control for displaying a caption on a form. Can be used for a stand alone caption or in conjunction with some other control as a label for that control.

It can be used at level 5 or level 4.

```
<gjs:caption
  for='gaga'
  accesskey='X'
  readonly='0|1'   Default: 0
>
  <label>Xyz</label>
</gjs:caption>
```

Level 5

Synopsis

```
<xsl:include href='gjsForm.xsl' />

<gjs:form
  ...
  locale='{ /Form/user/@locale }'>

  <gjs:caption
    for='gaga'
    accesskey='X'
    readonly='0|1'   Default: 0
  >
    <label>Xyz</label>
  </gjs:caption>
```

Examples

```
<gjs:caption
  for='customerName'
  accesskey='N'
  readonly='0'>
  <label>Customer Name</label>
</gjs:caption>
```

```
<gjs:caption
  readonly='1'>
  <label>Supplier Name</label>
</gjs:caption>
```

```
<gjs:caption
  for='patient'
  accesskey='P'>
  <label>Patient</label>
</gjs:caption>
```

Notes

The style of the caption is inherited from the user's desktop settings; the font size, face and colour are all inherited.

The *for* and *accesskey* attributes are used to associate a caption with an input field on the form. They are not required for *read only* captions.

Level 4

Synopsis

```
<xsl:include href='gjsControls.xsl' />

<link rel='StyleSheet' href='gjsForm.css' type='text/css' />
<script src='Calendar.js' />
```

```
<gjs:caption
  for='gaga'
  accesskey='X'
  readonly='0|1'   Default: 0
>
  <label>Xyz</label>
</gjs:caption>
```

Examples

```
<xsl:include href='gjsControls.xsl' />

<xsl:template match="Form">
  <html>
    <head>
      <link rel='StyleSheet' href='gjsForm.css' type='text/css' />
    </head>
    <body>

      <table>
        <tr>
          <gjs:caption
            for='customerName'
            accesskey='N'
            readonly='0'>
            <label>Customer Name</label>
          </gjs:caption>
        </tr>

        <tr>
          <gjs:caption
            readonly='1'>
            <label>Supplier Name</label>
          </gjs:caption>

          <gjs:caption
            for='patient'
            accesskey='P'>
            <label>Patient</label>
          </gjs:caption>
        </tr>
      </table>
    </body>
  </html>
</xsl:template>
```

Notes

The style of the caption is inherited from classes *caption* and *captionDisabled*. If *gjsForm.css* is used then the style is inherited from the user's desktop settings; the font size, face and colour are all inherited.

The *for* and *accesskey* attributes are used to associate a caption with an input field on the form. They are not required for *read only* captions.
